

Notetaking Tips for Synthetic Material Research

How is it made? (Include what natural resources are required and what chemical processes are used to change these natural resources into the product that you are researching.)

What properties does your material have that make it useful?

What types of things is your synthetic material used in or to make?

What are some positive impacts that this material has on society?

Negative impacts?

Any other interesting information that you discovered while researching:

Don't forget to list each website that you find helpful: (You need at least 3 resources)

www.....

Be creative with your pictures. What might be a good idea for a picture to include for each section of your project? (There are 5 required pictures in different places....)
